

TRY IT

As you review problems or formulas, leave key ideas visible on the board so students can reference them while working.

WHY TRY IT?

- Keeps important ideas accessible during work time
- Supports connections between strategies and representations
- Promotes understanding of big mathematical ideas

TEACHER NOTES

Keep worked examples, definitions, formulas, or representations visible while students work independently. Leave important ideas posted as long as they remain useful to the current task. Refer students back to the displayed work when they need support or connections.

CAUTION

Do not compromise size and visibility to fit more things on the board. Be judicious in what you leave up.
