STUDENTS ON BOARD

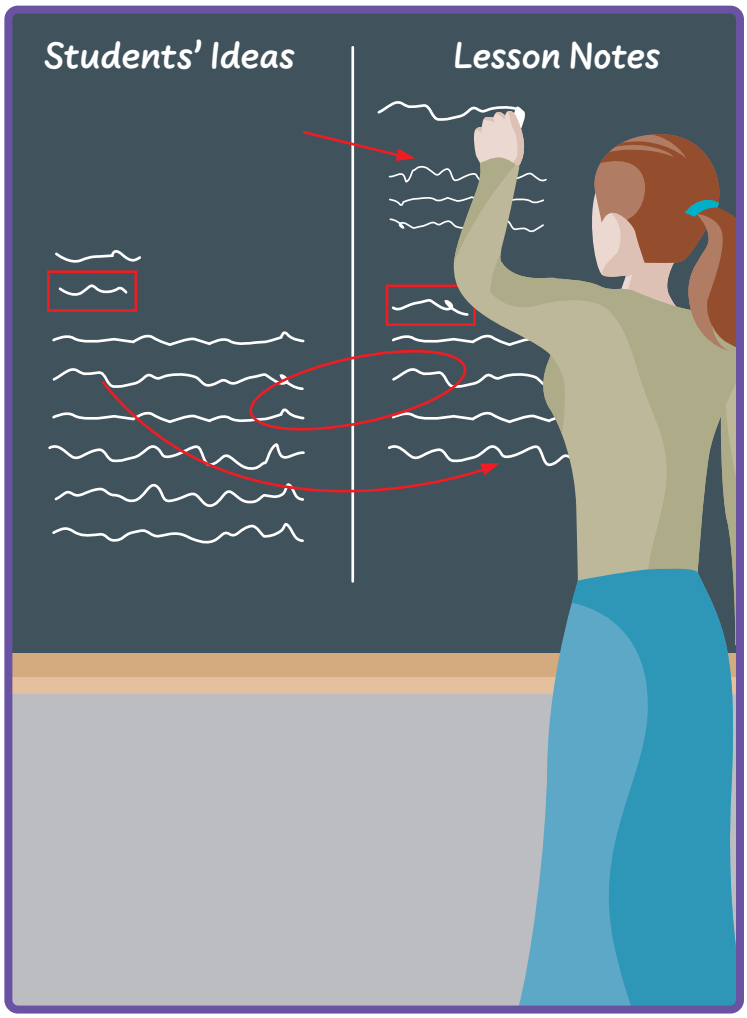

TRY IT

Plan to display student work on the board and refer back to it as you explain and connect lesson ideas.

WHY TRY IT?

- Increases engagement by elevating student thinking
- Supports conceptual connections across examples
- Shares authority for mathematical ideas with students

TEACHER NOTES

Display detailed student thinking rather than only final answers. You may ask students to write directly on the board or record their thinking yourself as they explain it. Over time, vary whose work is featured so many students see their ideas represented.

CAUTION Do not clutter the board with too much work.
